QUESTION 58 Hotspot Question You are designing an Exchange Server 2016 organization. The organization will use a single namespace of mail.contoso.com for all client access protocols. You plan to use load balancers. You identify the following requirements for the load balancing solution: - The Edge Transport server log files must contain the original IP address of the SMTP hosts. - Clients must be able to connect only when they use the approved hostnames and the approved virtual directories. You need to identify which type of load balancer meets each requirement. What should you identify? To answer, select the appropriate options in the answer area. Answer: **QUESTION 59** Hotspot Question You deploy an Exchange Server 2016 organization. The organization contains two servers. The servers are configured as shown in the following table. The default self-signed certificates are installed on both

servers. All of the users in the organization work from home and from customer locations. You purchase a Layer 7 hardware-based load balancer. You configure SSL bridging without session affinity for Outlook on the web connections. The load balancer has an internal fully qualified domain name (FQDN) of lb1.contoso.local. DNS servers are configured to resolve mail.contoso.com names to the external IP address of the load balancer. You need to recommend which names must be included in the certificates installed on the load balancers and the Exchange servers. What should you recommend for each certificate? To answer, select the appropriate options in the answer area. Answer: QUESTION 60 Drag and Drop Question You have an Exchange Server 2016 organization. The organization contains five servers.
